

Fitting and printing Instructions

All of our layouts are available for print and fitment confirmation on your instrument. Our PDF outlines of pickguards layouts are set up at 100% scale with all components in the exact position that they would be cut in the final part.

You will not be able to tell if the outline is accurate simply by looking at it or holding it over the guitar.

For acoustic guitars, please cut out with a pair of scissors the particular layout and place it over the guitar to see if the template will work for your particular instrument.

For Electric guitars you will need to remove your original pickguard and lay it over the printed PDF outline for the most accurate results.

It is very important to be sure you print the PDF outlines at 100% scale. There are some basic printer dialogue settings that you may need to set to ensure that the outline will be printed at 100% scale.

The image below is a screen capture of a common printer dialogue box to give you an idea where to look for the setting.
